

ABSTRACT OF THE DISCLOSURE

An assembly for a shade system of a motor vehicle, such as a roll-up shade or a sliding sunroof, includes a guide rail and a slide movable in the guide rail. The slide includes a braking element engageable in a braking groove of the guide rail to stop the slide in a desired position in the guide rail. The slide has a swivel pin and a support element acted upon by a spring and set apart from the swivel pin. The support element is supported on the guide rail so that the braking element is forced into the braking groove to stop the slide in the guide rail.
